

Since XM is a subscription service, it is very unfair that the NAB should be allowed to sponsor a bill that attempts to restrict XM programming! One of the great things about satellite radio is the varied and diverse stations that it offers. This includes traffic and weather broadcasts. I am on the road often and appreciate that I am able to turn to a satellite radio station and get immediate news, weather, and traffic info without having to hunt for the local broadcast and wait for them to get around to broadcasting the news and traffic info. Please reject the NAB's petition and allow Satellite radio to continue to offer the high quality and diverse services that it provides!
